

## Declaration concerning REACH conformity (1907/2006/EC)

In the terminology of REACH, BIBUS METALS AG is a distributor of “products, which under normal and foreseeable conditions do not emit any chemical substances or preparations”. From REACH there are no obligations to register resulting from the delivery of “products”.

We have contacted our suppliers regarding this issue. The substances and/or preparations on which the products are based have been preregistered by the manufacturer works and reported to the European Chemicals Agency ECHA.

Our suppliers have determined, that the products sold to Bibus Metals AG do not contain any appreciable quantities of chemical compounds of the REACH candidate list for “Substances of Very High Concern” (SVHC). These products are therefore regarded as REACH-compliant.

On the basis of the statements made by our suppliers we can state, that with a high degree of probability no loss of availability of the products of BIBUS METALS AG is to be reckoned with.

In the welding electrodes division the commodities cannot be categorised as “products”, but instead constitute “preparations”. It has been assured, that as “preparations” welding electrodes have been registered by the suppliers at the level of the substances used.

BIBUS METALS AG will comply with any possible future duties to provide information in the logistics chain, in particular the reporting of new findings concerning substance-related risks and market restrictions.

If you have further questions about the REACH conformity of our products, we kindly ask you to contact your usual contact partner or write directly to [REACH@bibus.ch](mailto:REACH@bibus.ch)
